

PALAZZANI

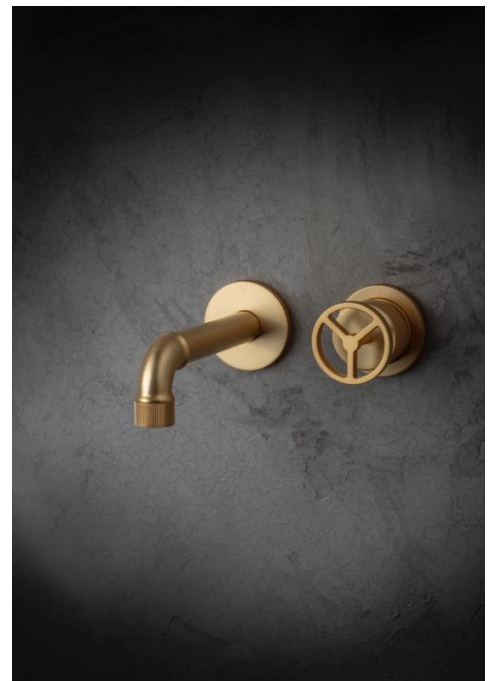

Stars and stripes mood for Palazzani.eu new collection INDUSTRIAL JOB designed by Andrea Zani

Faucets collection **INDUSTRIAL JOB** – designed by **Andrea Zani** in collaboration with stylistic department **Palazzani.eu** – interprets the versatility of Italian manufacturing inserting a new, typically American aesthetical language, with the purpose of highlighting both the aesthetic cut of the ancient manufacturing, and the ability of processing metal through the most advanced technologies of production.

Modern and clean lines are in perfect balance with harsh tones of this typical industrial design and make all complements of the collection suitable for any kind of environment, both residential and contract.

The accurate chromatic research of the finishing (with thickness up to 20 micron) and the wide range of the components on the catalogue, allow decorating in a fully coordinate manner any space dedicated to daily welfare. Architect and designers can “play” with colours, shapes, and lines to characterize their projects.

With faucets and shower systems collection **INDUSTRIAL JOB**, highly inspired to the powerful industrial aesthetic but wisely refined by the hand of the designer **Andrea Zani**, **Palazzani.eu** expands its offer, dedicated to the furniture of contemporary bathrooms.
